(54) Title: METHOD AND TOOL FOR MODIFYING A PROCEDURAL MAP

(57) **Abstract:** Method for modifying a procedural map for use with a tree driven procedural map comprising a plurality of levels (at least two levels) each having at least one node associated to at least one parameter, comprising the steps of: • providing a node selection tool allowing the selection of at least one node of one level among the plurality of nodes of a map to be modified; • select a given node according to a given input; • provide a parameter modification tool allowing the modification of at least one parameter of the selected node; • modify said parameter of said node based on a given input; • calculate a modified map based on the modified parameters. The invention also provides the map generation and modification tools for the implementation of this method.
